Drip-drop, Trickle, Oops!

※ What is Kappa? Have a look at the box left.

The Kappa Brothers want to live a simple life. So they decide to share a single plate on their heads. But to do this, they need your hand.

Help them achieve their goal by using the straw and your hands. Let some water drop into the elder brother's plate, then lift it up and carry it to the younger brother's head without spilling it. The whimsical fishes frustrate your effort and gradually you will find yourself in real struggle! It's a new balance game where you can experience the surprising power of surface tension.

〈Components〉

Kappas' Faces

Use the stickers and make your own Kappa Brothers' faces.

〈Order of Play〉

1. Fill a cup with water, and prepare as follows.

※ Please find a space where things can get wet.

2. The player who has drunk water the most recently starts the game. Shuffle the two fish chips inside your hands and toss them on the table. Take 1 of the following actions depending on the combination of the two fishes.

3. During a turn, a player tosses the fish chips and takes 1 action. If you spill any water while dropping water or moving the plate, you will lose the game.

Tossing the fish chips

 = Drop water into the plate twice.

 = Drop water into the plate once, and then move the plate. (※1)

 = Move the plate (※2)

※1. The order of action is always, drop water ▷ move the plate

※2. You only need to move the plate once during a turn.

Actions

▶ Dropping water

Hold the straw and dip it into water as shown.

While dipping, cover the mouth of the straw with your index finger so as to leave no air. Take the straw out and carry it near the plate, then leave your index finger so the water flows out.

How deep the straw is in the water determines the amount of water retained in the straw.

Too much water

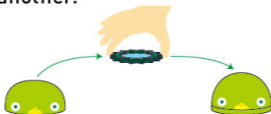

Too little water

Dropping water “once” means you have to pour out all the water inside the straw onto the plate. Adjust the amount of water to suck in depending on how much you want to pour out. If there is too little water in the straw and not even a drop comes out, you need to redo it.

▶ Moving the plate

When moving the plate, you can use only one hand or use both hands. Hold the plate at its tips and carefully move the plate from one Kappa to another.

- ※Dry the components well before putting them back into the box.
